Bengaluru Lakes Snapshot, monsoon 2026

Every lake on the Greater Bengaluru custody lists, read from Sentinel-2 as relative, uncalibrated readings, with an order of priority for restoration funding. Reading window: **monsoon (Jun-Sep) 2026** for 173 of 180 assessed lakes (each lake's own window is named in the list). Archive 28 March 2017 to 30 August 2026; observed passes only, nothing interpolated. A post-monsoon edition follows in November 2026 on the same method.

What this snapshot is for

Greater Bengaluru lists 210 lakes in the care of four agencies. Each is monitored in its own way, and no single reading covers all of them on the same footing, so a funder, a custodian or a lake group has no common basis on which to decide where the next rupee of restoration money does the most good.

This snapshot reads every listed lake the same way, from free satellite imagery going back to 2017: how much of each lake is open water, vegetation or exposed bed, how green the water is, how much of its usual extent it holds, whether it is built over, and how it compares with its own past. It sets these beside the regulator's June 2026 classification and the works already on record, and orders the lakes by a published rule into classes a funder can act on: Fund now, Co-fund, Design first, and the rest.

It is a starting point, not a verdict. Every reading carries its uncertainty and a confidence class, nothing is estimated where there is no observation, and the order improves with each edition, with ground sampling, and with surveyed boundaries.

Custody lakes on the KTCDA lists

How to read a number in this report

Each value is a seasonal median of clear satellite passes, shown as **value ± band** with **n** passes and a confidence class **H / M / L**. The band is the reading's own uncertainty (sampling and classification for shares, spread across passes for indices). A Health Card band is assigned only where the band is wider than the error; otherwise both candidate bands are listed. Where the evidence is too thin, the value reads "insufficient".

Why nothing reads High. A class is the weakest of six components, and two cannot reach High from a 10 m satellite and a mapped boundary: closeness to shore (only lakes over about 100 ha escape it) and boundary provenance (High needs a surveyed boundary). Medium is the ceiling for now; a surveyed boundary and a field calibration unlock High.

What this snapshot cannot say

Dissolved oxygen, BOD, COD, nutrients, coliform, metals and toxins have no optical signature; the regulator's Use Based Class (KSPCB, June 2026) is shown beside the satellite reading for 101 lakes and is never recomputed. Chlorophyll and turbidity are relative indices until a field calibration exists; no calibrated concentration appears here. The vegetation share includes floating mats and emergent reeds inside the footprint. Encroachment is read at 10 m from Dynamic World and needs a survey sketch or a sub-metre scene before any claim. Boundaries are OpenStreetMap polygons united with the observed water extent, not survey boundaries.

The first ten in the order

1. **Yelahanka Amani kere** (BBMP, 244 acres): Fund now; Algal bloom on the open water; KSPCB class E
2. **Puttenahalli Lake** (Forest Department, 22 acres): Fund now; 100% covered by vegetation; almost no water this season; KSPCB class E
3. **Doddakalasandra Lake** (BBMP, 14 acres): Fund now; 99% covered by vegetation; almost no water this season; KSPCB class D
4. **Kannalli kere** (BBMP, 56 acres): Fund now; 93% covered by vegetation; almost no water this season; KSPCB class E
5. **Hosakerahalli Lake** (BBMP, 37 acres): Fund now; 91% covered by vegetation; holds 20% of its usual water; KSPCB class E
6. **Rachenahalli Lake** (BBMP, 92 acres): Fund now; Algal bloom on the open water; KSPCB class E
7. **Saul Kere** (BBMP, 45 acres): Fund now; 73% covered by vegetation; holds 17% of its usual water
8. **J.P Park (Mathikere Lake)** (BBMP, 11 acres): Fund now; 84% covered by vegetation; almost no water this season; froth seen about 8 times a year; KSPCB class D
9. **Parappana Agrahara** (BBMP, 11 acres): Fund now; 100% covered by vegetation; almost no water this season; KSPCB class D
10. **Gangondanahalli Lake** (BBMP, 39 acres): Fund now; 99% covered by vegetation; almost no water this season; KSPCB class E

Lakes are ordered within the city as the funding unit; custodians are not compared.

The city in one view

■ Fund now
 ■ Co-fund
 ■ Design first
 ■ Other classes

Numbers mark the first ten in the ordered list; lakes under 20 ha are drawn as dots.

Beyond the frame: Bheemanakuppa Lake (Watch / verify). Fixed footprints of the 180 assessed lakes on the five 2025 corporation outlines, coloured by Need class. Footprint = mapped boundary united with the observed water extent since 2017.

Condition A (best) to E (worst) is the worse of the median and the worst repeated input over six readings: share of its usual water held, built share, vegetation cover, algae in the water, froth events and the regulator's class.

Need class by Neer Vazhvu's published rules: Condition D or E with a tractable boundary and no works on record reads Fund now (a budget line alone does not change it); with works on record, Co-fund; with a boundary or built-up question, or no water held in the window, Design first; a single severe input against an otherwise sound reading is a flag for a closer read (Watch / verify), not a verdict.

The regulator's view, June 2026: KSPCB classed 68 monitored lakes D (wildlife and fisheries) and 62 E (irrigation and industrial cooling), none A to C; 101 of those stations join a custody lake here.

Lakes with no open water observed in nine years: B. Channasandra, Chikka Begur Lake, Chikkakalasandra Lake, Mallasandra gudde Lake, Mylasandra (Sunnakallu palya) lake, Pattandur agrahara lake-124, Pattangere/Kenchenahalli lake, Sadaramangala Lake, Srinivasapura Lake, Vasanthapura Kere / Janardhana Kere. These read as dry, vegetated or built over at 10 m and are listed with Low boundary confidence.

The ordered list, fundable now first

Open water and vegetation cover (mats, reeds, scum) are shares of the lake's footprint in its reading window (percent $\pm$ points). Algae in the water is read from the greenness of the open water on five levels: clear water, some algae, algae-rich water, heavy algae, algal bloom (the satellite index behind it is shown small). n = clear passes with a value. H / M / L = confidence class. Rows shaded orange are Fund now and Co-fund. Condition A (best) to E (worst) is the worse of the median and the worst repeated input over storage, built share, vegetation, chlorophyll, froth and the regulator's class. The reason under each Need class names the inputs that drive it; every input per lake, with its band, is in the appendix at the end.

#	Lake	Need class and why	Condition	Open water	Vegetation cover	Algae in the water	KSPCB class	Programme on record	Conf.

1. Yelahanka Amani kere

Listed as Yelahanka Amani kere (BBMP); North corporation, Aerocity ward; footprint 98.6 ha (244 acres); reading window pre-monsoon (Mar-May) 2026, 18 clear passes.

Fund now. Algal bloom on the open water; KSPCB class E; no works on record.

What the satellite shows. Open water over 95% of the footprint; algal bloom on the open water; KSPCB's June 2026 class is E.

What the money buys: nutrient control at the inlets and in-lake aeration.

Open water (share of footprint)	95% ± 5 (n 18, M)
Vegetation cover (mats, reeds, scum)	4% ± 5 (n 18, M)
Exposed bed	1% ± 5 (n 18, M)
Algae in the water (chlorophyll proxy)	algal bloom: 0.42 ± 0.07 (n 18, M)
Algae against its own history	98th percentile of its 2017-2025 pre-monsoon record (n 107)
Vegetation against its own history	25th percentile of its 2017-2025 pre-monsoon record (n 107)
Share of its usual water held	97% ± 6 (n 18, M)
Built share inside the footprint (2026)	0% (+0 points since 2019)
Froth passes per year (lower bound)	none recorded
KSPCB, June 2026	Class E; DO 2.8 mg/l, BOD 12 mg/l, turbidity 24 NTU
Programme on record	none
Drainage chain	position 5 in its chain, 0 listed lakes downstream; 7,186 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2017	2	93%	4%	algal bloom
2018	3	95%	1%	heavy algae
2019	18	88%	2%	heavy algae
2020	15	85%	10%	heavy algae
2021	13	86%	9%	clear water
2022	11	86%	10%	clear water
2023	13	84%	11%	algae-rich water
2024	14	89%	6%	algae-rich water
2025	18	89%	6%	heavy algae
2026	18	95%	4%	algal bloom

Medians of the clear passes in the pre-monsoon (March to May) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

2. Puttenahalli Lake

Listed as Puttenahalli Lake (Forest Department); North corporation, Doddabettahalli ward; footprint 8.7 ha (21.6 acres); reading window monsoon (Jun-Sep) 2026, 5 clear passes.

Fund now. 100% covered by vegetation; almost no water this season; KSPCB class E; no works on record.

What the satellite shows. Vegetation covers 100% of the lake in the reading window, with open water at 0%; KSPCB's June 2026 class is E.

What the money buys: weed and mat removal with inflow control so it does not regrow.

Open water (share of footprint)	0% ± 5 (n 5, M)
Vegetation cover (mats, reeds, scum)	100% ± 5 (n 5, M)
Exposed bed	0% ± 5 (n 5, M)
Algae in the water (chlorophyll proxy)	no open water to read
Algae against its own history	no baseline yet
Vegetation against its own history	96th percentile of its 2019-2025 monsoon record (n 38)
Share of its usual water held	0% ± 9 (n 5, M)
Built share inside the footprint (2026)	0% (-38 points since 2019)
Froth passes per year (lower bound)	2023: 1
KSPCB, June 2026	Class E; DO 2.4 mg/l, BOD 8 mg/l, turbidity 12 NTU
Programme on record	none
Drainage chain	position 4 in its chain, 1 listed lakes downstream; 5,562 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2019	3	15%	70%	algae-rich water
2020	5	6%	88%	algae-rich water
2021	7	22%	61%	algae-rich water
2022	8	32%	56%	heavy algae
2023	5	26%	44%	algae-rich water
2024	5	37%	57%	heavy algae
2025	5	0%	100%	
2026	5	0%	100%	some algae

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

3. Doddakalasandra Lake

Listed as Doddakallasandra Lake (BBMP); South corporation, Anjanapura ward; footprint 5.8 ha (14.4 acres); reading window pre-monsoon (Mar-May) 2026, 18 clear passes.

Fund now. 99% covered by vegetation; almost no water this season; KSPCB class D; no works on record.

What the satellite shows. Vegetation covers 99% of the lake in the reading window, with open water at 0%; KSPCB's June 2026 class is D.

What the money buys: weed and mat removal with inflow control so it does not regrow.

Open water (share of footprint)	0% ± 5 (n 18, M)
Vegetation cover (mats, reeds, scum)	99% ± 6 (n 18, M)
Exposed bed	1% ± 6 (n 18, M)
Algae in the water (chlorophyll proxy)	no open water to read
Algae against its own history	no baseline yet
Vegetation against its own history	95th percentile of its 2017-2025 pre-monsoon record (n 104)
Share of its usual water held	0% ± 7 (n 18, M)
Built share inside the footprint (2026)	3% (+0 points since 2019)
Froth passes per year (lower bound)	2022: 1, 2023: 1, 2024: 1
KSPCB, June 2026	Class D; DO 4.8 mg/l, BOD 8 mg/l, turbidity 27.5 NTU
Programme on record	none
Drainage chain	position 2 in its chain, 2 listed lakes downstream; 2,105 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

0.3 km across
Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2017	2	23%	77%	algal bloom
2018	3	61%	39%	algal bloom
2019	16	60%	40%	algal bloom
2020	13	62%	38%	algal bloom
2021	14	0%	7%	algae-rich water
2022	12	23%	69%	algae-rich water
2023	14	30%	58%	algae-rich water
2024	14	0%	35%	heavy algae
2025	16	0%	97%	heavy algae
2026	18	0%	99%	algae-rich water

Medians of the clear passes in the pre-monsoon (March to May) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

4. Kannalli kere

Listed as Kanna halli lake (BBMP); outside the 2025 ward layer corporation; footprint 22.5 ha (56 acres); reading window monsoon (Jun-Sep) 2026, 5 clear passes.

Fund now. 93% covered by vegetation; almost no water this season; KSPCB class E; no works on record.

What the satellite shows. Vegetation covers 93% of the lake in the reading window, with open water at 0%; KSPCB's June 2026 class is E.

What the money buys: weed and mat removal with inflow control so it does not regrow.

Open water (share of footprint)	0% ± 5 (n 5, M)
Vegetation cover (mats, reeds, scum)	93% ± 6 (n 5, M)
Exposed bed	5% ± 6 (n 5, M)
Algae in the water (chlorophyll proxy)	no open water to read
Algae against its own history	no baseline yet
Vegetation against its own history	78th percentile of its 2019-2025 monsoon record (n 27)
Share of its usual water held	0% ± 9 (n 5, M)
Built share inside the footprint (2026)	0% (+0 points since 2019)
Froth passes per year (lower bound)	none recorded
KSPCB, June 2026	Class E; DO 0.5 mg/l, BOD 35 mg/l, turbidity 24.6 NTU
Programme on record	none
Drainage chain	position 3 in its chain, 2 listed lakes downstream; 7,158 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2019	2	4%	84%	algae-rich water
2020	5	40%	49%	some algae
2021	6	9%	71%	heavy algae
2022	5	15%	78%	algae-rich water
2023	2	0%	94%	
2024	3	1%	94%	some algae
2025	4	0%	94%	clear water
2026	5	0%	93%	some algae

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

5. Hosakerahalli Lake

Listed as Hoskerehalli Lake (BBMP); West corporation, Bangarappa Nagara ward; footprint 15.0 ha (37 acres); reading window monsoon (Jun-Sep) 2026, 5 clear passes.

Fund now. 91% covered by vegetation; holds 20% of its usual water; KSPCB class E; no works on record.

What the satellite shows. Vegetation covers 91% of the lake in the reading window, with open water at 2%; KSPCB's June 2026 class is E.

What the money buys: weed and mat removal with inflow control so it does not regrow.

Open water (share of footprint)	2% ± 6 (n 5, M)
Vegetation cover (mats, reeds, scum)	91% ± 7 (n 5, M)
Exposed bed	4% ± 6 (n 5, M)
Algae in the water (chlorophyll proxy)	no open water to read
Algae against its own history	no baseline yet
Vegetation against its own history	20th percentile of its 2019-2025 monsoon record (n 25)
Share of its usual water held	20% ± 62 (n 5, M)
Built share inside the footprint (2026)	3% (-6 points since 2019)
Froth passes per year (lower bound)	none recorded
KSPCB, June 2026	Class E; DO 1 mg/l, BOD 27 mg/l, turbidity 18.6 NTU
Programme on record	none
Drainage chain	position 2 in its chain, 0 listed lakes downstream; 30,273 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2019	2	27%	56%	some algae
2020	2	4%	92%	some algae
2021	6	0%	98%	
2022	8	0%	99%	some algae
2023	3	0%	78%	algae-rich water
2024	3	0%	98%	heavy algae
2025	1	0%	98%	
2026	5	2%	91%	some algae

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

6. Rachenahalli Lake

Listed as Rachenahalli Lake (BBMP); North corporation, Jakkur ward; footprint 37.1 ha (92 acres); reading window monsoon (Jun-Sep) 2026, 6 clear passes.

Fund now. Algal bloom on the open water; KSPCB class E; no works on record.

What the satellite shows. Open water over 85% of the footprint; algal bloom on the open water; KSPCB's June 2026 class is E.

What the money buys: nutrient control at the inlets and in-lake aeration.

Open water (share of footprint)	85% ± 6 (n 6, M)
Vegetation cover (mats, reeds, scum)	14% ± 6 (n 6, M)
Exposed bed	1% ± 5 (n 6, M)
Algae in the water (chlorophyll proxy)	algal bloom: 0.44 ± 0.11 (n 6, L)
Algae against its own history	75th percentile of its 2020-2025 monsoon record (n 32)
Vegetation against its own history	69th percentile of its 2020-2025 monsoon record (n 32)
Share of its usual water held	89% ± 6 (n 6, M)
Built share inside the footprint (2026)	0% (+0 points since 2019)
Froth passes per year (lower bound)	none recorded
KSPCB, June 2026	Class E; DO 2 mg/l, BOD 8 mg/l, turbidity 10 NTU
Programme on record	none
Drainage chain	position 5 in its chain, 0 listed lakes downstream; 11,338 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2020	4	86%	9%	heavy algae
2021	3	85%	12%	heavy algae
2022	10	78%	16%	heavy algae
2023	3	82%	14%	heavy algae
2024	4	87%	13%	algal bloom
2025	8	75%	13%	heavy algae
2026	6	85%	14%	algal bloom

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

7. Saul Kere

Listed as Sowl kere (BBMP); East corporation, Shivanasamudra Ward ward; footprint 18.2 ha (45 acres); reading window monsoon (Jun-Sep) 2026, 7 clear passes.

Fund now. 73% covered by vegetation; holds 17% of its usual water; no works on record.

What the satellite shows. Vegetation covers 73% of the lake in the reading window, with open water at 13%.

What the money buys: weed and mat removal with inflow control so it does not regrow.

Open water (share of footprint)	13% ± 7 (n 7, M)
Vegetation cover (mats, reeds, scum)	73% ± 7 (n 7, M)
Exposed bed	14% ± 7 (n 7, M)
Algae in the water (chlorophyll proxy)	algae-rich water: 0.20 ± 0.16 (n 7, L)
Algae against its own history	71th percentile of its 2019-2025 monsoon record (n 24)
Vegetation against its own history	48th percentile of its 2019-2025 monsoon record (n 27)
Share of its usual water held	17% ± 9 (n 7, M)
Built share inside the footprint (2026)	0% (+0 points since 2019)
Froth passes per year (lower bound)	2026: 1
KSPCB, June 2026	no station joined
Programme on record	none
Drainage chain	position 6 in its chain, 1 listed lakes downstream; 5,863 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2019	1	3%	97%	algae-rich water
2020	2	8%	85%	some algae
2021	5	10%	85%	algae-rich water
2022	7	14%	83%	heavy algae
2023	7	51%	42%	algae-rich water
2024	4	5%	86%	algae-rich water
2025	1	15%	43%	algae-rich water
2026	7	13%	73%	algae-rich water

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

8. J.P Park (Mathikere Lake)

Listed as ,ward no 154 J.P Park / Bangalore North (BBMP); North corporation, J.P PARK ward; footprint 4.6 ha (11.5 acres); reading window monsoon (Jun-Sep) 2026, 6 clear passes.

Fund now. 84% covered by vegetation; almost no water this season; froth seen about 8 times a year; KSPCB class D; no works on record.

What the satellite shows. Vegetation covers 84% of the lake in the reading window, with open water at 2%; froth on 25 clear passes since 2024; KSPCB's June 2026 class is D.

What the money buys: weed and mat removal with inflow control so it does not regrow; surfactant and sewage control upstream of the weir.

Open water (share of footprint)	2% ± 7 (n 6, L)
Vegetation cover (mats, reeds, scum)	84% ± 10 (n 6, M)
Exposed bed	14% ± 9 (n 6, M)
Algae in the water (chlorophyll proxy)	no open water to read
Algae against its own history	no baseline yet
Vegetation against its own history	100th percentile of its 2019-2025 monsoon record (n 33)
Share of its usual water held	2% ± 10 (n 6, L)
Built share inside the footprint (2026)	0% (+0 points since 2019)
Froth passes per year (lower bound)	2022: 21, 2023: 11, 2024: 11, 2025: 14
KSPCB, June 2026	Class D; DO 4.2 mg/l, BOD 5 mg/l, turbidity 10 NTU
Programme on record	none
Drainage chain	position 2 in its chain, 0 listed lakes downstream; 9,374 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2019	2	31%	56%	heavy algae
2020	3	51%	39%	algae-rich water
2021	6	42%	58%	heavy algae
2022	9	22%	33%	some algae
2023	5	43%	22%	some algae
2024	5	38%	46%	some algae
2025	3	16%	57%	some algae
2026	6	2%	84%	

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

9. Parappana Agrahara

Listed as Parappana Agrahara / Bangalore (BBMP); South corporation, Naganathapura ward; footprint 4.6 ha (11.4 acres); reading window monsoon (Jun-Sep) 2026, 4 clear passes.

Fund now. 100% covered by vegetation; almost no water this season; KSPCB class D; no works on record.

What the satellite shows. Vegetation covers 100% of the lake in the reading window, with open water at 0%; KSPCB's June 2026 class is D.

What the money buys: weed and mat removal with inflow control so it does not regrow.

Open water (share of footprint)	0% ± 5 (n 4, L)
Vegetation cover (mats, reeds, scum)	100% ± 5 (n 4, M)
Exposed bed	0% ± 5 (n 4, M)
Algae in the water (chlorophyll proxy)	no open water to read
Algae against its own history	no baseline yet
Vegetation against its own history	100th percentile of its 2020-2025 monsoon record (n 29)
Share of its usual water held	0% ± 6 (n 4, L)
Built share inside the footprint (2026)	0% (+0 points since 2019)
Froth passes per year (lower bound)	2023: 1, 2024: 1
KSPCB, June 2026	Class D; DO 5.2 mg/l, BOD 6 mg/l, turbidity 34.9 NTU
Programme on record	none
Drainage chain	position 1 in its chain, 7 listed lakes downstream; 2,174 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2020	2	86%	14%	heavy algae
2021	6	74%	25%	heavy algae
2022	7	62%	38%	algal bloom
2023	6	69%	7%	heavy algae
2024	3	39%	25%	heavy algae
2025	5	0%	93%	algae-rich water
2026	4	0%	100%	

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

10. Gangondanahalli Lake

Listed as Gangondanahalli Lake (BBMP); outside the 2025 ward layer corporation; footprint 15.6 ha (39 acres); reading window monsoon (Jun-Sep) 2026, 5 clear passes.

Fund now. 99% covered by vegetation; almost no water this season; KSPCB class E; no works on record.

What the satellite shows. Vegetation covers 99% of the lake in the reading window, with open water at 0%; KSPCB's June 2026 class is E.

What the money buys: weed and mat removal with inflow control so it does not regrow.

Open water (share of footprint)	0% ± 5 (n 5, M)
Vegetation cover (mats, reeds, scum)	99% ± 6 (n 5, M)
Exposed bed	1% ± 6 (n 5, M)
Algae in the water (chlorophyll proxy)	no open water to read
Algae against its own history	no baseline yet
Vegetation against its own history	66th percentile of its 2019-2025 monsoon record (n 29)
Share of its usual water held	0% ± 18 (n 5, M)
Built share inside the footprint (2026)	0% (+0 points since 2019)
Froth passes per year (lower bound)	none recorded
KSPCB, June 2026	Class E; DO 0.7 mg/l, BOD 90 mg/l, turbidity 5.7 NTU
Programme on record	none
Drainage chain	position 3 in its chain, 0 listed lakes downstream; 4,392 buildings in the catchment
Boundary	mapped boundary and observed water, confidence medium

0.6 km across
Fixed footprint: the mapped boundary united with the observed water extent since 2017. All condition inputs for this lake are in the appendix.

The same season, year by year

Year	Clear passes	Open water	Vegetation	Algae
2019	2	11%	68%	some algae
2020	2	16%	75%	some algae
2021	6	2%	94%	some algae
2022	7	1%	98%	some algae
2023	5	0%	100%	
2024	4	0%	96%	algae-rich water
2025	3	0%	99%	
2026	5	0%	99%	some algae

Medians of the clear passes in the monsoon (June to September) of each year since 2017; a year with fewer than two clear passes shows its passes but its values should be read with care. The shaded row is this edition's reading window.

Surface composition, monthly medians 2019 to date

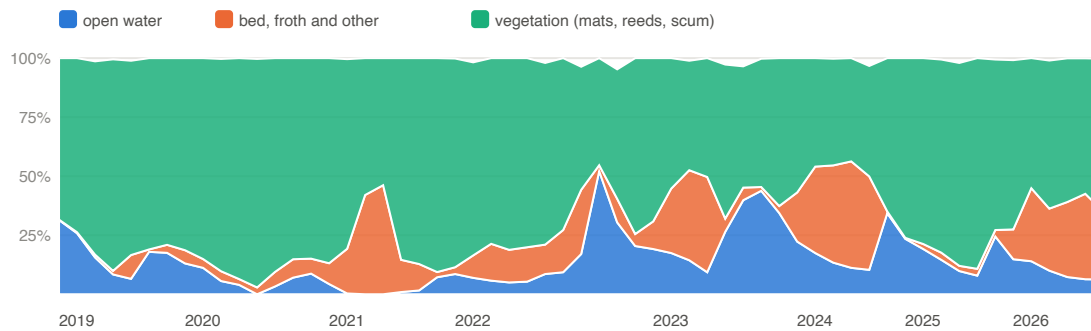

Open water, vegetation cover and the rest, per month; a month with fewer than two clear passes is a gap.

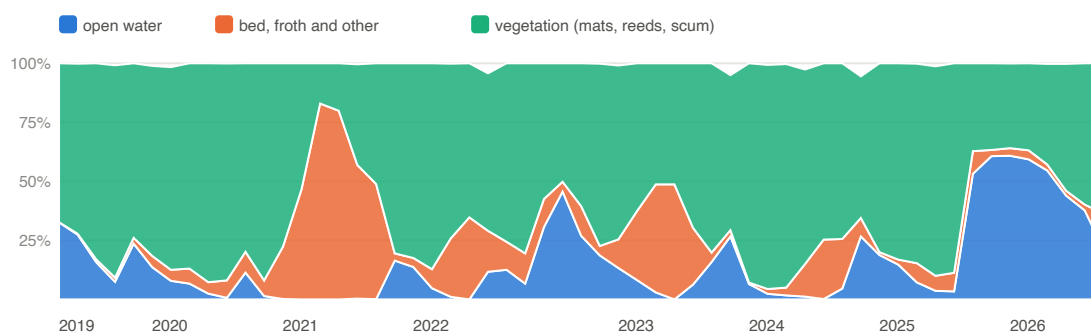

What continuous monitoring looks like

Three lakes, monthly medians of the surface composition from 2019 (a month with fewer than two clear passes is a gap, not a value). The monsoon months are thin on every lake, which is what an honest optical record looks like.

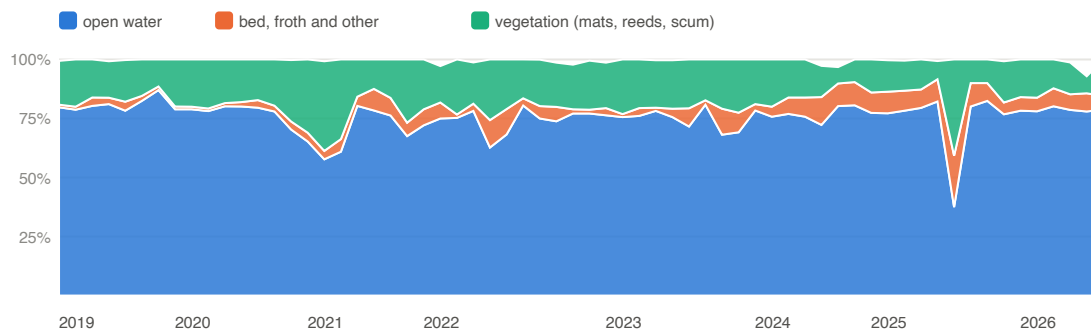

Bellandur (BDA)

Varthur (BDA)

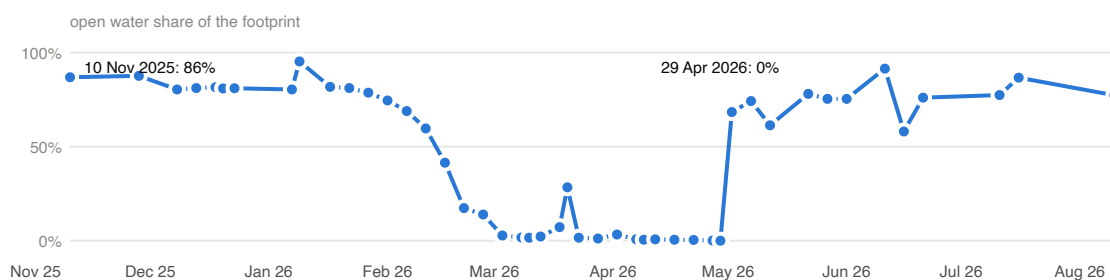

Jakkur (BBMP)

Surface classes per pass: open water, vegetation cover (floating mats, reeds along the margins, surface scum; a reed fringe is healthy, a hyacinth mat is not, and the split is a coming refinement), froth, and exposed bed. Sentinel-2, 10 m.

Ulsoor, November 2025 to August 2026

Open-water share of the footprint per clear pass. The lake was drained from February 2026 for its NDMF desilting works; the series will show the refill.

Coverage, 2019 to date

Median clear passes per lake per month. The monsoon gap is reported, never filled; the archive over Bengaluru is dense from 2019.

Assessed lakes with an algae reading: vegetation cover against algae in the water, reading window medians. Two groups: mat-covered lakes and bloom-prone open lakes; both are eutrophication, with different measures.

Confidence

Assessed lakes by the weakest of their open-water, vegetation and chlorophyll readings: insufficient 19, low 142, medium 19.

A confidence class is the weakest of six components: pixels inside the lake after the shoreline ring, the share of the lake close to shore, clear passes in the window, the length of the lake's own record, validation of the surface classes on the lake's type, and the boundary's provenance. High needs every component High, which a 10 m sensor cannot give a lake under about 20 ha and a mapped boundary cannot give any lake; Medium is the ceiling for the large lakes until a surveyed boundary and field calibration exist. The monsoon window also thins the clear passes; the post-monsoon edition will lift the pass component for most lakes.

The monsoon window. Storage is read in the wettest months, so the share-of-extent band flatters no lake, and the vegetation and algae readings are at their seasonal high; the November edition reads the same lakes after the rains.

Method, in brief

Universe. The Karnataka Tank Conservation and Development Authority custody lists for Bengaluru (BBMP, BDA, Forest Department, BMRCL): 210 lakes, each joined to a mapped boundary, the BBMP Lake Management System point, the 2025 ward and corporation, Neer Vazhvu's drainage-network layer, the regulator's June 2026 station, and the programme rows on record.

Sensor. Copernicus Sentinel-2 (10 m, a pass every two to three days over Bengaluru), every scene from March 2017 to the reading date, cloud-masked pixel by pixel; observed passes only, nothing interpolated.

Per lake, per pass. A fixed footprint (the mapped boundary united with the observed water extent); the share of the footprint reading as open water, vegetation (mats and emergent growth), froth and exposed bed; and on the open water, relative indices for chlorophyll, turbidity, coloured organic matter and apparent colour. These are relative readings: comparable across lakes and years, not concentrations.

Per lake, per window. Seasonal medians with their spread, percentile against the lake's own same-season history, water area and share of the observed maximum, froth events per year, built share inside the footprint, and the confidence class. Health Card bands are assigned only where the band is wider than the error.

Need class and order. Neer Vazhvu's published rules over four axes (Condition, Stakes, Tractability, Urgency) with the programme on record; lakes are ordered within the city as the funding unit. The full method, error model and rule set are in the Neer Vazhvu methodology note, available on request.

Unassessed at 10 m (30)

Listed with the reason. A traced boundary or a sub-metre image moves a lake into the assessed set.

Lake	Reason
Siddapura Lake BBMP -	no usable boundary at 10 m; location known
Gangashetty Lake BBMP -	no usable boundary at 10 m; location known; KSPCB samples at its station 'Gangashetty Lake' at 13.00502, 77.693716 (Class E, June 2026)
Puttenahalli / Byraweshwara BBMP -	no usable boundary at 10 m; location known
Lingadeeranahalli (handrahalli) North Lake Bangalore North BBMP -	no usable boundary at 10 m; location known
Chikkabasthi lake BBMP -	no usable boundary at 10 m; location known
Gandhinagar Hosakerehalli BBMP -	no usable boundary at 10 m; location known
Varahasandra Lake BBMP -	no usable boundary at 10 m; location known
Gattigerepalya (Sompura) lake BBMP -	no usable boundary at 10 m; location known
Chikkagowdanapalya lake BBMP -	no usable boundary at 10 m; location known
Busegowdana lake BBMP -	no usable boundary at 10 m; location known
Bayyapanapalya Kunte BBMP -	no usable boundary at 10 m; location known
Narasipura Lake 26 BBMP -	no usable boundary at 10 m; location known
(Nagasandra) BBMP -	no usable boundary at 10 m; no location known
19 Malagala BBMP -	no usable boundary at 10 m; no location known
Byatagunte Playa BBMP -	no usable boundary at 10 m; no location known
Lingarajapura Lake BBMP -	no usable boundary at 10 m; no location known
Geddalahalli BBMP -	no usable boundary at 10 m; no location known
Konena Agrahara BBMP -	no usable boundary at 10 m; location known
(Lingannana Bilaekahalli Kere) (Disused lake) BBMP -	no usable boundary at 10 m; no location known
Dorasanni Palya (Disused lake) BBMP -	no usable boundary at 10 m; no location known
Ittmadu BBMP -	no usable boundary at 10 m; no location known
Thavarekare BBMP -	no usable boundary at 10 m; no location known
Karisandra lake BBMP -	no usable boundary at 10 m; no location known
Nandi shettappa lake BBMP -	no usable boundary at 10 m; no location known
Arehalli 2 & 3 (Small tanks) (Disused lake) BBMP -	no usable boundary at 10 m; no location known
Bovimaranahalli BBMP -	no usable boundary at 10 m; no location known
Gundopanth lake BBMP -	no usable boundary at 10 m; no location known
Kamakshipalya Lake BBMP -	no usable boundary at 10 m; no location known
Sanegoravanahalli Lake BBMP -	no usable boundary at 10 m; no location known
Agraharadasarahalli Lake BBMP -	no usable boundary at 10 m; no location known

Appendix: condition inputs per lake

C1 share of observed extent held, C3 built share, C4 vegetation cover, C5 chlorophyll proxy, C8 froth events per year, G2 the regulator's class; a band followed by candidates in brackets, such as D(C/D), means the error band straddles a boundary and the value's band is shown with both candidates.
