

Bengaluru Lakes Snapshot, monsoon 2026

Every lake on the Greater Bengaluru custody lists, read from Sentinel-2 at Tier 1 (relative, uncalibrated), with an order of priority for restoration funding. Reading window: **monsoon (Jun-Sep) 2026** for 173 of 180 assessed lakes (each lake's own window is named in the list). Archive 28 March 2017 to 30 August 2026; observed passes only, nothing interpolated. A post-monsoon edition follows in November 2026 from the same pipeline.

Custody lakes on the KTCD lists 210 BBMP, BDA, Forest Department, BMRL; one duplicate row removed	Assessed at open resolution 180 30 unassessed: no polygon at 10 m, or below the evidence floors	Condition D or E 85 1,151 of 2,259 ha of assessed footprint	Fundable now 45 Fund now 37 and Co-fund 8; Design first 54
---	---	---	--

How to read a number in this report

Each value is a seasonal median of clear satellite passes, shown as **value ± band** with **n** passes and a confidence class **H / M / L**. The band is the reading's own uncertainty (sampling and classification for shares, spread across passes for indices). A Health Card band is assigned only where the band is wider than the error; otherwise both candidate bands are listed. Nothing below an evidence floor is shown as a value.

What this snapshot cannot say

Dissolved oxygen, BOD, COD, nutrients, coliform, metals and toxins have no optical signature; the regulator's Use Based Class (KSPCB, June 2026) is shown beside the satellite reading for 101 lakes and is never recomputed. Chlorophyll and turbidity are relative indices until a field calibration exists; no calibrated concentration appears here. The vegetation share includes floating mats and emergent reeds inside the footprint. Encroachment is read at 10 m from Dynamic World and needs a survey sketch or a sub-metre scene before any claim. Boundaries are OpenStreetMap polygons united with the observed water extent, not survey boundaries.

The first ten in the order

1. **Yelahanka Amani kere** (BBMP, 99 ha): Fund now, Condition E, KSPCB Class E, confidence medium
2. **Puttenahalli Lake** (Forest Department, 9 ha): Fund now, Condition E, KSPCB Class E, confidence medium
3. **Doddakallasandra Lake** (BBMP, 6 ha): Fund now, Condition E, KSPCB Class D, confidence medium
4. **Kalkere Lake** (BBMP, 49 ha): Fund now, Condition E, KSPCB Class E, confidence low
5. **Kanna halli lake** (BBMP, 22 ha): Fund now, Condition E, KSPCB Class E, confidence medium
6. **Hoskerehalli Lake** (BBMP, 15 ha): Fund now, Condition E, KSPCB Class E, confidence medium
7. **Rachenahalli Lake** (BBMP, 37 ha): Fund now, Condition E, KSPCB Class E, confidence low
8. **Sowl kere** (BBMP, 18 ha): Fund now, Condition E, confidence low
9. **J.P Park (Mathikere Lake)** (BBMP, 5 ha): Fund now, Condition E, KSPCB Class D, confidence low
10. **Parappana Agrahara** (BBMP, 5 ha): Fund now, Condition E, KSPCB Class D, confidence low

Order: Need class (Fund now, Co-fund, Intervene early, Design first, then the rest), Condition band, the published Need index, confidence, footprint area. Lakes are ordered within the city as the funding unit; custodians are not compared.

The city in one view

- Fund now
- Co-fund
- Design first
- Other classes

Numbers mark the first ten in the ordered list; lakes under 20 ha are drawn as dots

Beyond the frame: Bhimana kuppe (Watch / verify)

Fixed footprints of the 180 assessed lakes on the five 2025 corporation outlines, coloured by Need class. Footprint = mapped boundary united with the observed water extent since 2017.

Condition band = the worse of the median and, where two or more inputs read E, the worst input; inputs are the share of the observed maximum held (C1), built share inside the footprint (C3), vegetated share (C4), the chlorophyll proxy (C5), froth events (C8) and the regulator's class (G2).

Need class by the register's rules (plan section 7.2): Condition D or E with a tractable boundary and no works on record reads Fund now (a budget line alone does not change it); with works on record, Co-fund; with a boundary or built-up question, or no water held in the window, Design first; a single severe input against an otherwise sound reading is a flag for a closer read (Watch / verify), not a verdict.

The regulator's view, June 2026: KSPCB classed 68 monitored lakes D (wildlife and fisheries) and 62 E (irrigation and industrial cooling), none A to C; 101 of those stations join a custody lake here.

Lakes with no open water observed in nine years: B. Channasandra, Chikka Begur Lake, Chikkakalasandra Lake, Mallasandra gudde Lake, Mylasandra (Sunnakallu palya) lake, Pattandur agrahara lake-124, Pattangere/Kenchenahalli lake, Sadaramangala Lake, Srinivasapura Lake, Vasanthapura Kere / Janardhana Kere. These read as dry, vegetated or built over at 10 m and are listed with Low boundary confidence.

The ordered list, fundable now first

W1 open water and W2 vegetated share are shares of the footprint in the lake's reading window (percent ± points); Q1 is the chlorophyll proxy on the open-water core (index units ± half the spread across passes). n = clear passes with a value. H / M / L = confidence class. Rows shaded orange are Fund now and Co-fund. Condition inputs: C1 storage, C3 built, C4 vegetated, C5 chlorophyll proxy, C8 froth, G2 regulator; a band followed by candidates in brackets, such as D(C/D), means the error band straddles a boundary and the value's band is shown with both candidates.

What continuous monitoring looks like

Three lakes with named sub-zones, monthly medians of the surface composition from 2019 (a month with fewer than two clear passes is a gap, not a value). The monsoon months are thin on every lake, which is what an honest optical record looks like.

Bellandur (BDA)

Varthur (BDA)

Jakkur (BBMP)

Surface classes per pass: open water, vegetation (mats and emergent growth; bloom water stays open water and shows in the chlorophyll proxy), froth, and exposed bed. Sentinel-2, 10 m.

Ulsoor, November 2025 to August 2026

Open-water share of the footprint per clear pass. The lake was drained from February 2026 for its NDMF desilting works; the series will show the refill.

Coverage, 2019 to date

Median clear passes per lake per month. The monsoon gap is reported, never filled; the archive over Bengaluru is dense from 2019.

Assessed lakes with a computable chlorophyll proxy: vegetated share against the chlorophyll proxy on the open-water core, reading window medians. Two groups: mat-covered lakes and bloom-prone open lakes; both are eutrophication, with different measures.

Confidence

Assessed lakes by the weakest of their open-water, vegetation and chlorophyll readings: insufficient 19, low 142, medium 19.

A confidence class is the weakest of six components: pixels inside the lake after the shoreline ring, the share of the lake close to shore, clear passes in the window, the length of the lake's own record, validation of the surface classes on the lake's type, and the boundary's provenance. High needs every component High, which a 10 m sensor cannot give a lake under about 20 ha and a mapped boundary cannot give any lake; Medium is the ceiling for the large lakes until a surveyed boundary and field calibration exist. The monsoon window also thins the clear passes; the post-monsoon edition will lift the pass component for most lakes.

Method, in brief

Universe. The Karnataka Tank Conservation and Development Authority custody lists for Bengaluru (BBMP, BDA, Forest Department, BMRCL): 210 lakes, each joined to a mapped boundary, the BBMP Lake Management System point, the 2025 ward and corporation, the platform's cascade layer, the regulator's June 2026 station, and the programme rows on record.

Sensor. Copernicus Sentinel-2 (10 m, a pass every two to three days over Bengaluru), every scene from March 2017 to the reading date, cloud-masked pixel by pixel; observed passes only, nothing interpolated.

Per lake, per pass. A fixed footprint (the mapped boundary united with the observed water extent); the share of the footprint reading as open water, vegetation (mats and emergent growth), froth and exposed bed; and on the open water, relative indices for chlorophyll, turbidity, coloured organic matter and apparent colour. These are Tier 1 (relative) readings: comparable across lakes and years, not concentrations.

Per lake, per window. Seasonal medians with their spread, percentile against the lake's own same-season history, water area and share of the observed maximum, froth events per year, built share inside the footprint, and the confidence class. Health Card bands are assigned only where the band is wider than the error.

Need class and order. The register's published rules over four axes (Condition, Stakes, Tractability, Urgency) with the programme on record; lakes are ordered within the city as the funding unit. The full method, error model and rule set are in the Neer Vazhvu methodology note, available on request.

Unassessed at open resolution (30)

Listed after the ordered list with the queue reason, per the register rule. A hand-digitised boundary or a sub-metre scene moves a lake into the assessed set.

Lake	Queue reason
Siddapura Lake BBMP -	no polygon at open resolution; LMS point on record
Gangashetty Lake BBMP -	no polygon at open resolution; LMS point on record; KSPCB station 'Gangashetty Lake' at 13.00502, 77.693716 (Class E, June 2026)
Puttenahalli / Byraweshwara BBMP -	no polygon at open resolution; LMS point on record
